Application/Control Number: 10/074,554 Page 2

Art Unit: 2153

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/17/06 has been entered. Claims 1-20 are pending for examination.

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being Blatter et al. [U.S. Patent No. 6,016,348].
- 4. <u>Blatter et al.</u> discloses (e.g., see Figs. 1-23) the invention substantially as claimed. Taking claim 9 as an exemplary claim, the reference discloses a computer system comprising:
  - a) an application (video receiver) to receive data content (e.g., see col. 2, line 66);
  - b) a memory device to store the data content (e.g., see col. 3, lines 24-28, item 47 of Fig. 1);
    - c) a decoder to decode the content (e.g., see col. 3, lines 17 and 33); and
  - d) a decryption module (50) to <u>decrypt the data content</u>, and to monitor access to that memory device to <u>determine if memory buffers storing the data content have been accessed by a second application prior to the decoding of the data content (e.g., see col. 4, line 44, to col. 5, line 15).</u>

Page 3

Application/Control Number: 10/074,554

Art Unit: 2153

- 5. As to claim 10, Blatter discloses the decryption module monitors the memory buffers (60) by observing the state of a corresponding access bit (e.g., pre-load PIDS, col. 4, line 59, to col. 5, line 15) in the memory device page table entries (e.g., look-up table, col. 4, line 65, to col. 5, line 15).
- 6. As to claim 11, Blatter discloses the decryption module is tamper resistant to prevent modification (e.g., see col. 4, line 44, to col. 5, line 14, col. 6, lines 23-41).
- 7. As to claim 12, Blatter discloses an interface (70) coupled to the application, the decoder (80, 85) and the decryption module (50).
- 8. As to claim 13, Blatter discloses an encrypted format (e.g., see col. 3, line 1).
- 9. While Blatter discloses in Fig. 2 the feature of:
  - a) loading the encrypted keys in the encrypted key table;
  - b) pre-loading buffer with null data; and
  - c) determining whether or not the input data (SE) is equaled to the encrypted storage; and in Fig. 4, the feature of:
  - d) generating encryption key from stored encryption code; and
- e) loading PID, destination and encryption key look-up tables with other encrypted keys, etc., Blatter does not explicitly mention to the bit level of his page table entry where each bit corresponding to each of one or more memory buffers that is accessed by other application program. It would have been obvious to one or ordinary skill in the art at the time the invention was make to recognize that such specific use to the bit level of the page table entry would have been a matter of choice.

Application/Control Number: 10/074,554

Art Unit: 2153

10. Claims 1-8 and 14-20 are similar in scope as of claims 9-13, and therefore claims 1-8 and 14-20 are rejected for the same reasons set forth above for claims 9-13.

11. Applicant's arguments filed 1/17/06 have been fully considered but they are not deemed to be persuasive as mentioned in paragraph 9 above.

A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) days from the mail date of this letter. Failure to respond within the period for response will result in **ABANDONMENT** of the application (see 35 U.S.C 133, M.P.E.P 710.02, 710.02(b)).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krisna Lim whose telephone number is 571-272-3956. The examiner can normally be reached on Monday to Wednesday and Friday from 7:30 AM to 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess, can be reached on 571-272-3949. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
